EnergyManager PV smart

Feature to increase self-generated power consumption in use with HovalConnect.

If a HovalConnect gateway is used together with the heat pump, the free EnergyManager PV smart feature is available. This allows the heat pump to be operated preferentially at times of higher solar radiation. The feature uses online weather data on the current solar radiation for this purpose and can be adjusted by means of an associated threshold value. The self-consumption of electricity from an existing photovoltaic plant is thus increased and the purchase of grid electricity is reduced. This results in a lasting and significant cost-saving potential without further investment costs for the customer.

Delivery

- One-piece design. Compact unit wired-up internally ready for connection, supplied fully packaged
- Sensor set supplied loose

¹⁾ 2 % can be added for class II heat pump incl. control.

²⁾ 4 % can be added for class IV heat pump incl. control and room thermostat.

³⁾ kW = standard values according to EN 14511; values for B0W35 with 25 % monopolypropylene

⁴⁾ ΔT in accordance with regional regulations. The temperature difference is adjustable from 3 to 6 kelvin.
The pump regulates the volumetric current to the set temperature difference.

⁵⁾ < 10 °C: Crankcase heater is necessary

⁶⁾ Values for electrical data apply for supply voltage of 3~400 V

Thermalia® comfort (8-17), comfort H (7,10)

Sound emission

The effective sound pressure level in the installation room depends on various factors such as room size, absorption capacity, reflection, free sound propagation, etc.

Therefore it is important that the installation room lies, if possible, outside the noise-sensitive range and is supplied with sound-absorbing doors.

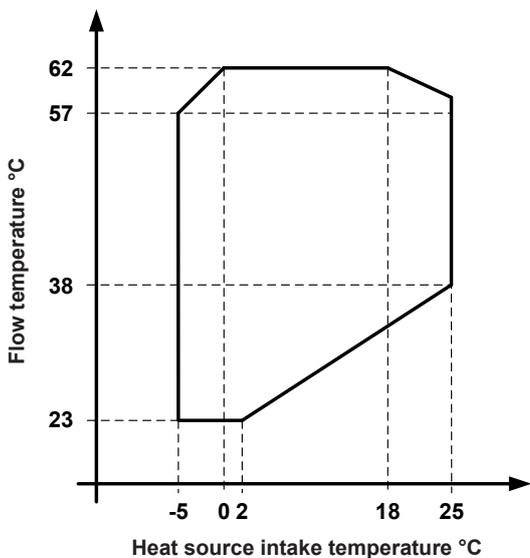

Ducts and pipes must be fixed to walls and ceiling in a way that no structure-borne sound is being transmitted to the system.
